 Variance inflation factor (VIF) is used to detect the severity of multicollinearity in the ordinary least square (OLS) regression analysis. Multicollinearity inflates the variance and type II error. It makes the coefficient of a variable consistent but unreliable. VIF measures the number of inflated variances caused by multicollinearity.

### Variance Inflation Factor (VIF) - Overview, Formula, Uses

In statistics, the variance inflation factor (VIF) is the quotient of the variance in a model with multiple terms by the variance of a model with one term alone. It quantifies the severity of multicollinearity in an ordinary least squares regression analysis. It provides an index that measures how much the variance (the square of the estimate's standard deviation) of an estimated regression ...

### VIF - What does VIF stand for? The Free Dictionary

The variance inflation factor (VIF) quantifies the extent of correlation between one predictor and the other predictors in a model. It is used for diagnosing collinearity/multicollinearity. Higher values signify that it is difficult to impossible to assess accurately the contribution of predictors to a model. How the VIF is computed

VIF score of an independent variable represents how well the variable is explained by other independent variables. R^2 value is determined to find out how well an independent variable is described by the other independent variables. A high value of R^2 means that the variable is highly correlated with the other variables.

The VIF for predictor i is 1 / (1 - R i 2), where R i 2 is the R 2 from a regression of predictor i against the remaining predictors. If R i 2 is close to 1, this means that predictor i is well explained by a linear function of the remaining predictors, and, therefore, the presence of predictor i in the model is redundant.

As the name suggests, a variance inflation factor (VIF) quantifies how much the variance is inflated.

Now you can review the fundamentals of the French language within context and expand your abilities as SUR LE VIF: NIVEAU INTERMEDIERE, 7E adds just enough new material to refine your reading, listening, writing and conversational skills without overwhelming you. This guide to intermediate French offers the ideal bridge between introductory French and specialized studies of culture, conversation, literature or writing. Nine brief but powerful chapters offer new and lengthened readings, themed writing practice and updated cultural notes. This edition provides updated vocabulary and grammar assignments to check your comprehension. New content and references to songs, videos, and listening practice help enhance your ability to comprehend spoken French and be easily understood in conversation with native speakers. By weaving grammar review into thought-provoking chapter themes, this edition reinforces understanding while preparing you to use the language in more complex communication. Human retroviruses, HIV and HTLV have been recognized as important pathogens because of their association with lethal diseases such as AIDS and ATL. Considerable resources and efforts have been directed at understanding the interaction between these retroviruses and their host which may provide clues as to how the infection can be controlled or prevented. Among the key scientific successes is the identification of intracellular "restriction factors" that have evolved as obstacles to the replication of pathogens including infectious retroviruses. The discovery of APOBEC, which are strong mutagens of retroviral genomes and intracellular retroelements, began a new era of intense research activities into the spectrum of intrinsic anti-HIV activity, leading to the identification of TRIM5a, BST2/Tetherin, and SAMHD1. In response, HIV has evolved several accessory genes as weaponries to evade these intracellular restriction activities. The intracellular antiretroviral defenses evolved in response to endogenous retroelements that make up more than 40% of the entire mammalian genome, and which are regarded as ancestors of infectious retroviruses. LTR-type retroelements are present in all higher eukaryotes, representing about 8% of the human genome. Non-LTR retroelements can be found at extremely high copy numbers also, with a significant portion of mammalin genomes consisting of LINES. Mammalian genomes are modified by LINES through insertions, but also by the indirect replication of non-autonomous retrotransposons such as SINES. LINES insertion was shown to have played, and continue to play important roles in genomic evolution and somatic genome mosaicism-mediated physiology. And, because retrotransposition can confer genetic diversity that is beneficial to the host, the vertebrate intrinsic immunity has evolved to support a balance between retroelement insertions that confer beneficial and those that cause deleterious gene disruptions. The articles published in this Research Topic should serve not only as valuable references for the field, but provide future topics of research for investigators that should further our understanding of the retrovirus, retroelements and their restrictions.

This book is an attempt to bridge the gap between the instrumental principles of multi-dimensional time-correlated single photon counting (TCSPC) and typical applications of the technique. Written by an originator of the technique and by successful users, it covers the basic principles of the technique, its interaction with optical imaging methods and its application to a wide range of experimental tasks in life sciences and clinical research. The book is recommended for all users of time-resolved detection techniques in biology, bio-chemistry, spectroscopy of live systems, live cell microscopy, clinical imaging, spectroscopy of single molecules, and other applications that require the detection of low-level light signals at single-photon sensitivity and picosecond time resolution.

Ce livre n'est pas tout à fait un livre «sur» Jean-Luc Godard. Ecrit entre Rolle, où vit et travaille le cinéaste, et Paris, où le journal Libération traverse la plus grave crise de son histoire, Godard vif est à la fois une évocation, une enquête critique développée, un reportage subjectif et un journal de bord courant sur quelques mois à peine, même s'il est nourri des fruits sauvages ramassés au cours d'un chemin long de plus de vingt-cinq ans, où JLG et moi nous sommes parfois retrouvés. Ce livre a voulu enregistrer un moment qui m'a semblé extraordinaire dans le cours de ce chemin, et marquer de sa petite pierre une fracassante année 2014, où tout s'est conjugué pour lui donner une bifurcation...

Developed over years of classroom use, this textbook provides a clear and accessible approach to real analysis. This modern interpretation is based on the author's lecture notes and has been meticulously tailored to motivate students and inspire readers to explore the material, and to continue exploring even after they have finished the book. The definitions, theorems, and proofs contained within are presented with mathematical rigor, but conveyed in an accessible manner and with language and motivation meant for students who have not taken a previous course on this subject. The text covers all of the topics essential for an introductory course, including Lebesgue measure, measurable functions, Lebesgue integrals, differentiation, absolute continuity, Banach and Hilbert spaces, and more. Throughout each chapter, challenging exercises are presented, and the end of each section includes additional problems. Such an inclusive approach creates an abundance of opportunities for readers to develop their understanding, and aids instructors as they plan their coursework. Additional resources are available online, including expanded chapters, enrichment exercises, a detailed course outline, and much more. Introduction to Real Analysis is intended for first-year graduate students taking a first course in real analysis, as well as for instructors seeking detailed lecture material with structure and accessibility in mind. Additionally, its content is appropriate for Ph.D. students in any scientific or engineering discipline who have taken a standard upper-level undergraduate real analysis course.
