Introduction: Modern Wind Energy and its Origins ...

The law is derived from the principles of conservation of mass and momentum of the air stream flowing through an idealized "actuator disk" that extracts energy from the wind stream. According to Betz's law, no turbine can capture more than  $16/27$  (59.3%) of the kinetic energy in wind. The factor  $16/27$  (0.593) is
